

Object-Oriented Programming Using C++

605.604

JOHNS HOPKINS UNIVERSITY
Whiting School of Engineering

Due Date 07/26/21

Earlier in the semester we demonstrated the development of an integer array class. Develop a template class for an array in which various types of arrays could be handled. Write a program that creates and displays arrays of integers, floats, strings, and Date objects (where Date objects model a date using integer month, day, year attributes).

Submit source code and a screen capture of your executing program.
