605.611 - Foundations of Computer Architecture

Assignment 06 - Branching and Jumps

Sabbir Ahmed

March 4, 2021

1. Translate statements 1, 2, and 5 into machine code. Assumes the program loads at $0x0040\ 0000$.

```
1 label_1:
2     b label_2
3 j label_3
4     addi $t0, $t1, 100
5     sub $t0, $t1, $t2
6 label_2:
7     b label_1
8 label_3:
9     addi $t0, $t1, 100
```

2. Explain, in your own words, how a 26 bit address in the jmp instruction can access any executable statement in a program. This must be your own words. Copying something from the internet does not count.
