Assignment 00: Team Project - Getting Started

Before you start your team project assignment(s), join or form a team. A team will consist of minimum three (3) members and maximum five (5).

During this semester, each student will work as part of a team. Each student must lead her or his team at least once for a minimum period of one week. As a lead, a student will be responsible to produce a deliverable in collaboration with her or his team that will be counted towards project grades.

Once your team has been formed, please send your team name and the list of team members with their contact information to me – so that I can contact any one of you and check the progress / status of your assignment if necessary.

Each assignment will have a minimum one deliverable. The team lead will submit the deliverable via email or using Blackboard. Please ask any questions you may have for me at least two (2) days before the assignment submission or due date.

Please check the Blackboard as frequently as possible to follow instructions, guidance or hints – and I will support you in any way I can.

Before you start with your assignment, please read and perform the following activities:

1. Read the attached Team Project Case Statement
2. Browse through the Simple Buying Guide of Hospital Management System at https://www.capterra.com/hospital-management-software/#buyers-guide
3. Conduct research on the Internet (preferably each one of you do it individually) to find anything more that you can add to the Project Case Statement.
4. Document your findings, observations, and suggestions – and you will submit this document as a team with your **Assignment 01**.
5. Finally, please review the slides in Module 03 – as this module discusses various topics associated with Requirements Gathering. I recommend that you browse a web site that may help you in preparing your problem statement with five (5) Ws and One (1) H:
